2. CITATIONS AND EXPLANATIONS

Claims 1, 7-10, 12-14, 20-23, 25-27, and 30-32 lack novelty under PCT Article 33(2) as being anticipated by HYAMA et al. U.S. Patent Number 6,332,448. Iiyama et al. Iiyama discloses a fuel supply device, which supplies fuel in a main tank (8) to a vehicle engine (20), a fractional distiller (9) fractionates the fuel in the main tank (8) into a high-octane fuel component and a low octane fuel component, and stores these fuel components in sub tanks (10, 11). The high-octane fuel component is supplied by a high-pressure intermittent pump (16), and the low octane fuel component is supplied by a variable pressure pump (15), to a fuel injector (17) of the engine (20). A controller (1) identifies a running region by the rotation speed and loads of the engine (20), determines the proportion of fuel components supplied to the engine (20) according to the identified running region and controls a discharge pressure of the variable pressure pump (15) so that the determined proportion is achieved.

Claims 2-6, 11, 15-19, 24, 28 and 29 lack an inventive step under PCT Article 33(3) as being obvious over Iiyama et al in view of Chan U.S. Patent Number 5,560,344. Iiyama et al. failed to show the duel tank as claimed in application. However, it is not considered an inventive step considering Chan discloses a duel tank system for different octane fuels.
